DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20, drawn to demultiplexing and processing a plurality of data channels in a SONET network, classified in class 370 subclass 542.
- II. Claims 21-28, drawn to Input/Output interface, classified in class 370, subclass 419.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination evidence claims 1 and 11 do not set forth the details of the subcombination a process of providing row location, column location, channel ID and frame ID of the SONET header, and the subcombination overhead extractor interface for processing has separate utility (fig. 2, element 108), the inventions are distinct and restriction is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
